ABOUT US

VANTECH is a future ready private limited company legally registered under the companies' act 2012 and incorporated according to 2016 regulations, leading the mass adoption of climate-smart technologies in the water and energy resource industry for sustainable agriculture and landscapes, residential and industrial use.

We are one of the well-established clean water and energy consultants and service provider situated in Uganda with our headquarters in Kampala, advocating for use of renewable energy and technologies that contribute to sustainable water management whilst contributing to food security.

With our solutions and real results-oriented professional team, we provide rentless innovations (by the people and for the people) and the most life advancing technologies in production.

We have established partnerships with internationally trusted, recognized and quality product manufacturing companies for the products and services that we offer to our esteemed clients, we offer these backed with authorization and guarantee by the manufacturers. These manufacturers include, Jain, Automat, Neta firm, Yuzuak (for irrigation equipment), Honda, Perkins, launtop, power Italia (for engine pumps and generators), Pedrollo, DAB, Intec tools (for submersible pumps).

We have recently established an upper hand in precision agriculture through campaigns of the smart controlled environment cultivation and safe postharvest handling technologies.

Our customer base covers individuals, private sector, non-governmental organizations (NGOs) and the government institutions.

We are bound to professionally transforming with everyone in key sectors of:

- Irrigation technologies.
- solar systems (solar water pumping, lightings etc.)
- water sourcing, pumping and treatment.
- rehabilitations.
- sustainable water management.
- Precision controlled environment cultivation.
- Safe crop protection.

COMPANY REGISTRATION NUMBER: 80020003001939

We have clearly and genuinely set a pace and identified ourselves as leaders of sustainable water management through low volume and gravity-based irrigation technologies on the Ugandan market for the time.

MISSION STATEMENT

Lead the mass adoption of climate and environment smart technologies by providing actionable information and increasing accessibility to more advanced, simple and affordable water and energy solutions for a more sustainable future for all.

VISION STATEMENT

Become a top choice professional innovative yet a consistent reliable water and energy solutions Centre in Africa for an inclusive sustainable future

CORE VALUES

- Sustainability
- Reliability
- Transformation with excellence
- Awareness and accessibility
- Commitment and accountability.

Water sourcing and rehabilitation works

OUR SERVICES AND PRODUCTS

Our professional team be it sales representative, will technically approach any kind challenge in water and energy for production to provide the most suitable and tangible solution. We carry out complete assessments, system designs, selection, supply, installations, operations and management of systems for our clients with the utmost technical requirements at hand and free consultations in the areas of speciality below:

Irrigation And Fertigation

With complete assessments, we design, install and maintain the most efficient sprinkler systems, micro irrigation systems and the most advanced low volume and gravity based drip and micro irrigation systems that deliver precision performance regardless of the seasons while distributing soluble minerals to plants through pipes.

Solar Systems And Equipment

We select ,supply ,install and maintain solar water pumping ,heating and lighting (both off and on grid) systems customized to fit every particular requirement.

Water Sourcing and Rehabilitation works

Where surface water is absent or insufficient , our water engineers ,will carry out hydrological surveys ,source and drill the under ground water ,construct wells (both shallow and deep wells), excavate water harvesting dams , test wells and install pumping systems from these alternative water source . This water can be collectect in the reservior tanks (both raised and onground) for sustainable use or collected directly from the manual bores.

Water Pumping Systems and Hardware

With specific site data at hand ,we size,select,supply ,install and maintain all types of water pumping systems (sutrface and submercibles) whether engine run or solar powered including the water transfer versatile and durable layflats ,hoses ,tubing pipes engineered with the latest technology.

Gensets

We supply ,install and maintain alternative power sources to back up outages and act as sole power supplies in some areas with no electrricty, our modern generators are sized and selected according to the power requirements for a given task.

Controlled Environment Cultivation

Our visionary and future ready team designs ,constructs and maintains the green houses,tunnels ,screenhouse and the postharvest handling solar driers . The respective technologies ensure high quality yileds in the small spaces espically urban centers and the solar driers reduce post harvest losses .

Lawn Care services

COMPANY REGISTRATION NUMBER: 80020003001939

We plan ,design and establish the most beautiful and attractive lawns as well and improving and maintaining the existing one ranging from small residential compounds ,parks ,municipals to golf courses and standard playgrounds. We are well equipped with necessary tools and lawn irrigation equipment hardware to execute. We also test and supply (in both small and large quantities) top quality and durable equipment and tools used in lawn care for example ,engine brush cutters ,mowers, hedge trimmers etc.

Consultancy

We offer free yet life changing consultancy services in the water and energy for agricultural production ,agronomy,crop protection ,agribusiness ,post harvest handling and animal husbandry.

Trainings

We share actionable and technical information on mechanized and irrigated agriculture and other water and energy related issues to the general public through organised trainings.

Through trainings , our clients and general communities utilize the actionable and technical information to make informed decisions that in a long run shift them from subsistence to commercial agriculture.
